Nature of the Sample: NBC News/WSJ/Marist New Hampshire Poll of 2,059 Adults

This survey of 2,059 adults was conducted January 2nd through January 7th, 2016 by The Marist Poll sponsored and funded in partnership with NBC News and *The Wall Street Journal*. Adults 18 years of age and older residing in the state of New Hampshire were interviewed in English by telephone using live interviewers. Landline telephone numbers were randomly selected based upon a list of telephone exchanges from throughout the state of New Hampshire from ASDE Survey Sampler, Inc. The exchanges were selected to ensure that each region was represented in proportion to its population. Respondents in the household were randomly selected by first asking for the youngest male. To increase coverage, this landline sample was supplemented by respondents reached through random dialing of cell phone numbers from Survey Sampling International. Both samples were matched by telephone number to a voter registration list for the state. Voter information was appended to each matched case. Assistance was provided by Luce Research for data collection and L2 for voter registration information. After the interviews were completed, the two samples were combined and balanced to reflect the 2013 American Community Survey 5-year estimates for age, gender, income, race, and region. Results are statistically significant within ±2.2 percentage points. There are 1,888 registered voters. The results for this subset are statistically significant within ±2.3 percentage points. Among registered voters, 886 had a phone match in the voter file and 1,002 did not. The results for these subsets are statistically significant within ±3.3 percentage points and ±3.1 percentage points, respectively. There are 887 voters in the potential Republican primary electorate. The potential Republican primary electorate in New Hampshire includes unaffiliated voters who prefer to vote in the Republican presidential primary and registered Republicans without a primary preference. There are 690 voters in the potential Democratic primary electorate. The potential Democratic primary electorate in New Hampshire includes unaffiliated voters who prefer to vote in the Democratic presidential primary and registered Democrats without a primary preference. The results for these subsets are statistically significant within ±3.3 percentage points and ±3.7 percentage points, respectively. There are 569 likely Republican primary voters and 425 likely Democratic primary voters defined by a probability turnout model which determines the likelihood respondents will participate in the 2016 New Hampshire Republican/Democratic Presidential Primary based upon their chance of vote, interest in the election, and past election participation. The results for these subsets are statistically significant within ±4.1 percentage points and ±4.8 percentage points, respectively. The error margin was not adjusted for sample weights and increases for cross-tabulations.
