Nature of the Sample: 684 New York City Residents

This survey of 684 New York City residents was conducted on April 21\textsuperscript{st} and April 22\textsuperscript{nd}, 2010. Residents 18 years of age and older were interviewed by telephone. Telephone numbers were selected based upon a list of telephone exchanges from throughout the city. The exchanges were selected to ensure that each borough was represented in proportion to its population. To increase coverage, this land-line sample was supplemented by respondents reached through random dialing of cell phone numbers. The two samples were then combined. Results are statistically significant at ±4.0\%.
