How the Survey was Conducted

Nature of the Sample: NBC 4 NY/Marist Poll of 1,195 New York City Adults

This survey of 1,195 New York City adults was conducted September 13th through September 17th. 2017 by The Marist Poll sponsored and funded in partnership with NBC 4 New York. Adults 18 years of age and older residing in New York City were interviewed in English or Spanish by telephone using live interviewers. Mobile telephone numbers were randomly selected based upon a list of telephone exchanges from throughout the city from Survey Sampling International. The exchanges were selected to ensure that each region was represented in proportion to its population. Mobile phones are treated as individual devices. After validation of age, personal ownership, and non-business-use of the mobile phone, interviews are typically conducted with the person answering the phone. To increase coverage, this mobile sample was supplemented by respondents reached through random dialing of landline phone numbers from ASDE Survey Sampler, Inc. Within each landline household, a single respondent is selected through a random selection process to increase the representativeness of traditionally under-covered survey populations. The samples were then combined and balanced to reflect the 2013 American Community Survey 5-year estimates for age, gender, income, and borough, except for race, which is from the 2010 census. Results for adults are statistically significant within ±2.8 percentage points. There are 898 registered voters. Results for this subset are statistically significant within ±3.3 percentage points. There are 451 likely voters defined by a probability turnout model which determines the likelihood respondents will participate in the 2017 election for New York City mayor based upon their chance of vote, interest in the election, and past election participation. Results for this subset are statistically significant within ±4.6 percentage points. The error margin was not adjusted for sample weights and increases for cross-tabulations.
