This *Wall Street Journal*/NBC 4 New York/Marist Poll reports:

New York State Governor Andrew Cuomo is a strong, early favorite to win re-election as he heads into 2014. When matched against several potential Republican gubernatorial candidates, Cuomo leads each of them by at least 40 percentage points.

“Right now, Governor Cuomo is in good shape to win a second term. None of Governor Cuomo’s likely challengers are in striking distance,” says Dr. Lee M. Miringoff, Director of The Marist College Institute for Public Opinion. “But, voters think any plans Cuomo might have for 2016 need to take a backseat until Hillary Clinton declares her intentions.”

If the 2014 election for New York State Governor were held today, here is how Governor Cuomo would fare among registered voters in New York State:

- Against Steve McLaughlin, Cuomo would garner 64% while McLaughlin would receive 24%. 12% are undecided.
- 65% would back Cuomo compared with 23% for Rob Astorino. 12% are undecided.
- If Cuomo were to face off in a rematch against Carl Paladino, Cuomo -- 67% -- would defeat Paladino -- 24% -- by 43 percentage points. Nine percent are undecided.
- 70% of registered voters would support Cuomo in a contest against Donald Trump -- 24%. Seven percent are undecided.

A majority of registered voters in New York State -- 52% -- approves of the job the governor is doing. This includes 8% of voters who think Cuomo is doing an excellent job and 44% who describe Cuomo’s job performance as good. 31% give Cuomo fair marks while 13% report he is performing poorly. Three percent are unsure.

By region:

- New York voters' rating of Cuomo has changed little throughout the state.

Clinton leads all of her potential Democratic opponents by more than four to one in New York.

64% of registered Democrats statewide support Clinton compared with 14% for Andrew Cuomo. Eight percent back Vice President Joe Biden while Massachusetts Senator Elizabeth Warren garners 6%. Three percent support Maryland Governor Martin O'Malley, and 5% are undecided.

Texas Governor Rick Perry, Texas Senator Ted Cruz, Wisconsin Governor Scott Walker each garners 3%. New Mexico Governor Susana Martinez has the backing of 2%. An additional 2% support former Pennsylvania Senator Rick Santorum. 15% are undecided.

However, when matched against Cuomo or Clinton in the general election contest, Christie does not fare as well in this very blue state. Cuomo leads Christie, 51% to 44%, among New York's registered voters. Five percent are undecided. Clinton has a wider lead over Christie. 57% of registered voters in New York State support Clinton compared with 39% for Christie. Four percent are undecided.

How the Survey was Conducted

Nature of the Sample: WSJ/NBC 4 NY/Marist Poll of 817 New York State Adults

This survey of 817 adults was conducted November 18th through November 20th, 2013 by The Marist Poll sponsored in partnership with *The Wall Street Journal* and NBC 4 New York. Adults 18 years of age and older residing in the state of New York were interviewed by telephone using live interviewers. Landline telephone numbers were randomly selected based upon a list of telephone exchanges from throughout the state from ASDE Survey Sampler, Inc. The exchanges were selected to ensure that each region was represented in proportion to its population. To increase coverage, this landline sample was supplemented by respondents reached through random dialing of cell phone numbers from Survey Sampling International. The two samples were then combined and balanced to reflect the 2010 Census results for age, gender, income, race, and region. Results for adults are statistically significant within ± 3.4 percentage points. There are 675 registered voters. The results for this subset are statistically significant within ± 3.8 percentage points. The sample of registered voters was adjusted for turnout in statewide elections. There are 294 Democrats and 167 Republicans. The results for these subsets are statistically significant within ± 5.7 percentage points and ± 7.6 percentage points, respectively. The error margin increases for cross-tabulations.
