

## How the Survey was Conducted

---

### **Nature of the Sample: National Poll of 1,029 Adults**

This survey of 1,029 adults was conducted on December 2<sup>nd</sup> through December 8<sup>th</sup>, 2010. Adults 18 years of age and older residing in the continental United States were interviewed by telephone. Telephone numbers were selected based upon a list of telephone exchanges from throughout the nation. The exchanges were selected to ensure that each region was represented in proportion to its population. To increase coverage, this land-line sample was supplemented by respondents reached through random dialing of cell phone numbers. The two samples were then combined. Results are statistically significant within  $\pm 3.0$  percentage points. There are 873 registered voters. The results for this subset are statistically significant within  $\pm 3.5$  percentage points. The error margin increases for cross-tabulations.
