McClatchy-Marist Poll National Survey April 18, 2011

How the Survey was Conducted

Nature of the Sample: National Poll of 1,274 Adults

This survey of 1,274 adults was conducted on April 10th through April 14th, 2011. Adults 18 years of age and older residing in the continental United States were interviewed by telephone. Telephone numbers were selected based upon a list of telephone exchanges from throughout the nation. The exchanges were selected to ensure that each region was represented in proportion to its population. To increase coverage, this land-line sample was supplemented by respondents reached through random dialing of cell phone numbers. The two samples were then combined. Results are statistically significant within ± 3.0 percentage points. There are 1,084 registered voters. The results for this subset are statistically significant within ± 3.0 percentage points. There are 551 registered voters who completed the survey before President Obama's April 13th speech and 470 registered voters who completed the survey after his speech. The results for these subsets are statistically significant within ± 4.5 percentage points. The error margin increases for cross-tabulations.
