How the Survey was Conducted

Nature of the Sample: McClatchy-Marist National Poll of 1,080 Adults

This survey of 1,080 adults was conducted on March 20\textsuperscript{th} through March 22\textsuperscript{nd}, 2012. Adults 18 years of age and older residing in the continental United States were interviewed by telephone. Telephone numbers were selected based upon a list of telephone exchanges from throughout the nation. The exchanges were selected to ensure that each region was represented in proportion to its population. To increase coverage, this land-line sample was supplemented by respondents reached through random dialing of cell phone numbers. The two samples were then combined. Results are statistically significant within ±3.0 percentage points. There are 846 registered voters. The results for this subset are statistically significant within ±3.5 percentage points. The error margin increases for cross-tabulations.
