

How the Survey was Conducted

Nature of the Sample: South Carolina Poll of 2,529 Adults

This survey of 2,529 adults was conducted from December 4th through 6th, 2011. Adults 18 years of age and older residing in the state of South Carolina were interviewed by telephone. Telephone numbers were selected based upon a list of telephone exchanges from throughout the state. The exchanges were selected to ensure that each region was represented in proportion to its population. To increase coverage, this land-line sample was supplemented by respondents reached through random dialing of cell phone numbers. The two samples were then combined. Results for adults are statistically significant within ± 2.0 percentage points. There are 2,107 registered voters. The results for this subset are statistically significant within ± 2.1 percentage points. There are 957 potential Republican primary voters, that is, voters who identify as Republicans, Republican leaning independents, and those who plan to vote in the South Carolina Republican Presidential Primary. The results for this subset are statistically significant within ± 3.2 percentage points. There are 635 likely voters defined by a probability turnout model which determines the likelihood respondents will vote in the 2012 South Carolina Republican Presidential Primary based upon their chance of vote, interest in the election, and past election participation. The results for this subset are statistically significant within ± 3.9 percentage points. The error margin increases for cross-tabulations.

Nature of the Sample - South Carolina

		South Carolina Adults	South Carolina Registered Voters
		Col %	Col %
South Carolina Adults		100%	
South Carolina Registered Voters		83%	100%
