

How the Survey was Conducted

Nature of the Sample: South Carolina Poll of 2,040 Adults

This survey of 2,040 adults was conducted January 15th and 16th, 2012. Adults 18 years of age and older residing in the state of South Carolina were interviewed by telephone. Telephone numbers were selected based upon a list of telephone exchanges from throughout the state. The exchanges were selected to ensure that each region was represented in proportion to its population. To increase coverage, this land-line sample was supplemented by respondents reached through random dialing of cell phone numbers. The two samples were then combined. Results for adults are statistically significant within ± 2.2 percentage points. There are 1,780 registered voters. The results for this subset are statistically significant within ± 2.3 percentage points. There are 884 potential Republican primary voters, that is, voters who identify as Republicans, Republican leaning independents, and those who plan to vote in the South Carolina Republican Presidential Primary. The results for this subset are statistically significant within ± 3.3 percentage points. The error margin increases for cross-tabulations. This Marist Poll was sponsored by Americans for a Better Tomorrow, Tomorrow.
