

How the Survey was Conducted

Nature of the Sample: New York City Poll of 772 Adults

This survey of 772 New York City adults was conducted on March 22nd through March 24th, 2011. Adults 18 years of age and older residing in the five boroughs of New York City were interviewed by telephone. Telephone numbers were selected based upon a list of telephone exchanges from throughout the city. The exchanges were selected to ensure that each borough was represented in proportion to its population. To increase coverage, this land-line sample was supplemented by respondents reached through random dialing of cell phone numbers. The two samples were then combined. Results are statistically significant within ± 3.5 percentage points. There are 395 baseball fans. The results for this subset are statistically significant within ± 5.0 percentage points. The error margin increases for cross-tabulations.

Nature of the Sample: Adults
