

## How the Survey was Conducted

---

### **Nature of the Sample: New York City Poll of 657 Adults**

This survey of 657 New York City adults was conducted on January 24<sup>th</sup> through January 31<sup>st</sup>, 2011. Adults 18 years of age and older residing in the five boroughs of New York City were interviewed by telephone. Telephone numbers were selected based upon a list of telephone exchanges from throughout the city. The exchanges were selected to ensure that each borough was represented in proportion to its population. To increase coverage, this land-line sample was supplemented by respondents reached through random dialing of cell phone numbers. The two samples were then combined. Results are statistically significant within  $\pm 4.0$  percentage points. There are 508 registered voters. The results for this subset are statistically significant within  $\pm 4.5$  percentage points. There are 361 renters. The results for this subset are statistically significant within  $\pm 5.5$  percentage points. The error margin increases for cross-tabulations.
