

## How the Survey was Conducted

---

### **Nature of the Sample: National Poll of 1,042 Adults**

This survey of 1,042 adults was conducted on September 13<sup>th</sup> and September 14<sup>th</sup>, 2011. Adults 18 years of age and older residing in the continental United States were interviewed by telephone. Telephone numbers were selected based upon a list of telephone exchanges from throughout the nation. The exchanges were selected to ensure that each region was represented in proportion to its population. To increase coverage, this land-line sample was supplemented by respondents reached through random dialing of cell phone numbers. The two samples were then combined. Results are statistically significant within  $\pm 3.0$  percentage points. There are 697 football fans. The results for this subset are statistically significant within  $\pm 4.0$  percentage points. The error margin increases for cross-tabulations.
