

## How the Survey was Conducted

---

### **Nature of the Sample: Marist National Poll of 1,173 Adults**

This survey of 1,173 adults was conducted December 3<sup>rd</sup> through December 5<sup>th</sup>, 2013 by The Marist Poll. Adults 18 years of age and older residing in the continental United States were interviewed by telephone using live interviewers. Landline telephone numbers were randomly selected based upon a list of telephone exchanges from throughout the nation from ASDE Survey Sampler, Inc. The exchanges were selected to ensure that each region was represented in proportion to its population. To increase coverage, this landline sample was supplemented by respondents reached through random dialing of cell phone numbers from Survey Sampling International. The two samples were then combined and balanced to reflect the 2010 Census results for age, gender, income, race, and region. Results are statistically significant within  $\pm 2.9$  percentage points. The error margin increases for cross-tabulations.
