

How the Survey was Conducted

Nature of the Sample: McClatchy-Marist Poll of 1,073 National Adults

This survey of 1,073 adults was conducted February 15th through February 19th, 2017 by The Marist Poll, sponsored and funded in partnership with McClatchy. Adults 18 years of age and older residing in the contiguous United States were contacted on landline or mobile numbers and interviewed in English by telephone using live interviewers. Landline telephone numbers were randomly selected based upon a list of telephone exchanges from throughout the nation from ASDE Survey Sampler, Inc. The exchanges were selected to ensure that each region was represented in proportion to its population. Respondents in the household were randomly selected by first asking for the youngest male. This landline sample was combined with respondents reached through random dialing of cell phone numbers from Survey Sampling International. After the interviews were completed, the two samples were combined and balanced to reflect the 2013 American Community Survey 1-year estimates for age, gender, income, race, and region. Results are statistically significant within ± 3.0 percentage points. There are 865 registered voters. The results for this subset are statistically significant within ± 3.3 percentage points. The error margin was not adjusted for sample weights and increases for cross-tabulations.
