

## How the Survey was Conducted

---

### **Nature of the Sample: Marist Poll of 1,455 National Adults**

This survey of 1,455 adults was conducted February 26th through February 29th, 2024 by the Marist Poll. Adults 18 years of age and older residing in the United States were contacted through a multi-mode design: By phone using live interviewers or online. Survey questions were available in English and Spanish. Phone and online samples were selected to ensure that each region was represented in proportion to its adult population. The samples were then combined and balanced to reflect the 2022 American Community Survey 5-year estimates for age, gender, income, race, and region. Results are statistically significant within  $\pm 3.0$  percentage points. There are 1,284 registered voters. The results for this subset are statistically significant within  $\pm 3.2$  percentage points. Tables include results for subgroups to only display crosstabs with an acceptable sampling error. It should be noted that although you may not see results listed for a certain group, it does not mean interviews were not completed with those individuals. It simply means the sample size is too small to report. The error margin was adjusted for sample weights and increases for cross-tabulations.

**Nature of the Sample**
