

How the Survey was Conducted

Methodology: Marist Poll of 1,128 National Adults

This survey of 1,128 adults was conducted February 3rd through February 4th, 2025 by the Marist Poll. Adults 18 years of age and older residing in the United States were contacted through online web surveys. All potential respondents were screened for age. A sampling frame based on aggregated non-probability online research panels was randomly selected from Cint's digital insights platform to administer the surveys collected via web. Survey questions were available in English or Spanish. Online samples were selected to ensure that each region was represented in proportion to its adult population. The samples were then balanced to reflect the 2022 American Community Survey 5-year estimates for age, gender, income, race, and region.

The margin of error for all adults (n=1,128) is ± 2.9 percentage points. The margin of error for registered voters (n=1,011) is ± 3.1 percentage points.

The partisan breakdown for this survey among registered voters is 36% Democrat, 36% Republican, and 28% independent.

Tables include results for subgroups to only display crosstabs with an acceptable sampling error. It should be noted that, although you may not see results listed for a certain group, it does not mean interviews were not completed with those individuals. It simply means the sample size is too small to report.

Nature of the Sample
