

How the Survey was Conducted

Methodology: NPR/PBS News/Marist Poll of 1,694 National Adults

This survey of 1,694 adults was conducted February 24th through February 26th, 2025 by the Marist Poll sponsored in partnership with NPR and PBS News. Adults 18 years of age and older residing in the United States were contacted through a multi-mode design: By phone using live interviewers, by text, or online. All potential respondents were screened for age. Probability-based sampling frames include landline, RDD cell phone sample plus cell phone sample based on billing address to account for inward and outward mobility within a state. Samples were provided by Dynata. A sampling frame based on aggregated non-probability online research panels was randomly selected from Cint's digital insights platform to administer the surveys collected via web. Survey questions were available in English or Spanish. All samples were selected to ensure that each region was represented in proportion to its adult population. The samples were then combined and balanced to reflect the 2022 American Community Survey 5-year estimates for age, gender, income, race, and region.

Results for all adults (n=1,694) are statistically significant within ± 2.8 percentage points. Results for registered voters (n=1,533) are statistically significant within ± 3.0 percentage points. The design effect for this survey is 1.41 which has been incorporated in the calculation of all reported margins of error.

The partisan breakdown for this survey among registered voters is 34% Democrat, 34% Republican, and 31% independent.

Tables include results for subgroups to only display crosstabs with an acceptable sampling error. It should be noted that, although you may not see results listed for a certain group, it does not mean interviews were not completed with those individuals. It simply means the sample size is too small to report.
