

Methodology: Marist Poll of 1,361 New York Registered Voters

This Marist Poll survey of 1,361 New York registered voters was conducted October 1st through October 4th, 2026, by the Marist Poll. Registered voters 18 years of age and older residing in New York were contacted through a multi-mode design: By phone using live interviewers (297), by text (813), or online (251). All potential respondents were screened for age and confirmation of registration in the state of New York. The telephone sample was randomly selected from L2's registered voter database of New York. The online sample was randomly selected from aggregated online panels whose members had been matched by Cint to the same L2 database. In surveys self-administered on the web, two attention check questions were asked that required the respondent to follow explicit directions. If respondents fail any data quality attention check question, these interviews are excluded from the sample and final analysis. Coding of any open-ended responses was done by a single human coder. Survey questions for all modes of data collection were available in English or Spanish. To ensure representativeness, data was balanced to match current estimates for registered voters by age, gender, income, and race/ethnicity using L2 voter parameters. Education was balanced to match current CPS estimates for registered voters. Region was adjusted for turnout in similar elections.

Results for registered voters (n=1,361) are statistically significant within ± 3.6 percentage points. Margins of error for subgroups are available upon request. The design effect for this survey is 1.8 which has been incorporated in the calculation of all reported margins of error. Research limitations can come from many potential sources, and there may be unmeasured factors in this or any other public opinion poll.

The partisan breakdown for this survey among registered voters is 42% Democrat, 28% Republican, and 28% independent.

Questions asked in this survey with the wording, results, and cross tabulations are included in this packet. Some questions may be held for a later release. If a question is asked of a subset of the sample, it is noted on the table. Tables include results for subgroups to only display crosstabs with an acceptable sampling error. It should be noted that, although you may not see results listed for a certain group, it does not mean interviews were not completed with those individuals. It simply means the sample size is too small to report. The Marist Poll is an educational program in public opinion research and funded by Marist University.

Nature of the Sample
